We are passionate about Skin & Hair health, so now that the sun is getting stronger, it feels timely to share some important information on sunscreens. **SPF (Sun Protection Factor)** measures how well a sunscreen protects the skin from UVB rays. It is the UVB rays that cause dangerous sunburn, damage the skin by accelerating ageing, and can contribute to Melanoma.

Here is a guide to burn times with your skin type:

- Fair skin - 10 minutes
- Olive skin - 15 minutes
- Dark skin - 20 minutes

Look at the SPF on your sunscreen e.g. SPF 15 Calculate your protection time, the amount of time you can stay outside before burning. Multiply the sun safety time for your skin type with the SPF listed on your sunscreen, e.g. 10 minutes (for fair skin) x SPF 15 = 150 minutes (2.5 hours) of sun protection.

Our Sunscreens of choice are;
Dermaviduals sunscreen broad-spectrum SPF 15 & 30 **\$50.00**, no perfumes or parabens so if you're sensitive this is the one for you.
Environ RAD Sunscreen broad- spectrum SPF 15 **\$56.00**. Both offer broad-spectrum sunscreen protection, guarding against the damage caused by both UVA and UVB rays.

Not forgetting about your luscious locks and that all important hair colour, it is just as important to have protection from those harsh summer rays, salt water and being outside in general.

Our Wella Sun Range has you covered.
